

LAMP CABINETS AND INDICATORS

Ronan's extensive line of Lamp Cabinets and Indicators is designed for indicating visual status from remote annunciator logic, Programmable Logic Controllers (PLCs) or from ON/OFF relay or solid state drivers.

We offer a large variety of window sizes and customized array assemblies so you can select the optimal window size based on your available panel space. And our unique window bezels ensure you of the proper window location when re-lamping is required.

Our displays are equipped with either multiple incandescent bulbs or multiple Light Emitting Diode (LED) assemblies, which provide a virtually infinite display life.

Individual window display termination is made directly to compression-type terminals or via lug connectors to screw-type terminals. In applications requiring premanufactured cable connection, we furnish multipin connectors to meet customer specifications.

Our lamp cabinets combine excellent mechanical design with superb structural integrity. The aluminum extrusion construction assures you of the best available heat dissipation during continuous operating conditions as well as a pleasing outward appearance.

Ronan's Lamp Cabinet/Indicator Series. Maximum flexibility along with virtually maintenance-free operation, adds up to the quality and value you're looking for.

SERIES LB

The Series LB Lamp Cabinet is an excellent choice for fixed window applications where external lamp test is available.

Isolated screw terminals are supplied for each window. This allows direct external connection or factory wiring to cabinet mounted multipin connectors for interface via multiconductor cables to the remote driver logic.

Each window offers two lamps for increased reliability and uniform light distribution.

The cabinet is factory assembled from the basic cabinet modules to fit your panel space in as many modules high and wide as desired. The all aluminum construction provides excellent heat dissipation to prevent any nameplate or bezel distortion from the lamp's heat.

SPECIFICATIONS

Standard Voltages: 24 Vdc, 48 Vdc, 125 Vdc, 24 Vac, 48 Vac, 115 Vac.

Cabinet Size: Any number of windows high and wide. (May exceed the numbers shown in the table below.)

Lamp Wattage: Two each 2-Watt lamps per window, except LB-4100 which has one 2-Watt lamp. 115 Vac and 125 Vdc models have 3-Watt lamps.

Lenses: Sandwich type lenses available.

Push-button Modules: Integral push-button modules offered as an option.

NAMEPLATE ENGRAVING DETAILS

.....

A complete line of sandwich-type lenses is available on most lamp cabinets.* With these lenses, the need for color caps and their effect of reducing lamp life are eliminated. Sandwich lenses provide an even distribution of color behind the front lens. These type lenses are recommended when a color display behind the white lens is required to indicate alarm functions such as high or low, or to distinguish between alarm and shutdown functions. The Standard sandwich lens is available with white front lens and black engraved letters. Consult factory for special applications.

*Not available on LB-2100 and LB2200 cabinets.
